Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.

WO200061151-A2,

```
The invention relates to novel immunogenic CpG oligodeoxynucleotides (AAG80581-68073). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5.*NNT-CpG*MNN-3 or 5.*R*CpG-RY Growprise one of the generic sequences 5.*NNT-CpG*MNN-3 or 5.*R*CpG-RY 3.* The central CpG motif is unmethylated, and the oligonucleotides optionally have phosphorothicate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides are able to induce either a cell-mediated (T-cell) response or a humoral (B-cell, antibody) response, with oligonucleotides of the sequence 5.*RY-CpG*RX-3 being able to induce a humoral tresponse. It is thought that after administration, the oligonucleotide acts on antigen-presenting cells cell; macrophages and dendritic cells) which then release cytokines, leading to activation of natural killer (NK) cells. A cell-mediated or induction of an immune response is useful for treating, preventing or mobination with an anti-allergenic agent or anti-infectious agent. The allergic conditions which may be treated include ezema, allergic conditions, and the infections which may be treated include exema, allergic conditions, and the infections which may be treated include viral, barfever, urticarial, fungal and profozoal infections such a tuberculosis, and the inname system deficiency, and symptoms resulting from the allergic conditions which may be treated include ezema, allergic conditions, and the innemens which may be treated include exema, allergic conditions which may be treated include exema allergic conditions which may be treated include exema allergic conditions of an autoinmune disorder (e.

```
The invention relates to novel immunogenic CpG oligodeoxynucleotides CC (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5'-NNNN-20G-WNNN-3' or 5'-RY-CpG-RY CTG-3'. The central CpG motif is unmethylated, and the oligonucleotides and cheer of degradation. The invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide of the sequence 5'-RY-CpG-RY-3' being able to induce a humoral (B-cell, antibody) response, with colligonucleotides act able to induce a thumoral tesponse. It is thought that after call induce and induce and those of the sequence 5'-NNY-CpG-WNN-3' being able to induce a humoral response. It is thought that after administration, the oligonucleotide acts on antigen-presenting cells administration of antiward natural (NN) cells. A cell-mediated or humoral response and dendritic cells), which then release cytokines, complex to an immunogenic CpG oligonucleotide is administered either alone or in combination with an anti-allergenic agent or anti-infectious agent. The allergic conditions which may be treated include eczeme, allergic conditions, and the infections which may be treated include viral, conditions, and the infections which may be treated include viral, conditions, and the infections which may be treated include viral, cused in the treatment of an autocimmune disorder (e.g., lupus casciated with immune system deficiency, and symptome resulting from a customate to an adent of biological warfare. An immunogenic CpG cligonucleotide, either alone or in combination with an anti-ties and endicency and the infections of a complex of an autocimmune and endiced of a pagent, is administered by the fairer 
                                                                                                                                                                                                                                                                                                                                                                                            Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                present sequence represents an immunogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immune response is used in antisense therapy and to improve the efficacy of a vaccine. The oligonuclectide is preferably administered to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunocogo oligodeoxynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ..

The invention describes a vaccine comprising one or more epitopes of a Paramyxoviridae F protein, and one or more CpG (cytosine followed by quantine linked by phosphate bond)-oligodideoxynucleotides (ODMs). The vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory syncytial virus (RsV), the primary cause of viral bronchiolitis and pneumonia in infants and children, and infectious pulmonary disease in infants. RsV has been particularly implicated in death of infants that are premature, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence represents an oligodideoxynucleotide that can be used in the creation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CpG oligodeoxynucleotide; dendritic cell; tumour; immunotherapy; vaccine; cytostatic; immunostimulant; gene therapy; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a vaccine comprising one or more epitopes of a Paramyxoviridae F protein, and one or more CpG (cytosine followed by Quanine linked by phosphate bond, -oligodideoxynucleotides (DNS). The vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory syncytial virus (RSV), the primary cause of viral bronchiolitis and pneumonia in infants and children, and infectious pulmonary disease in infants. RSV has been particularly implicated in death of infants that are premature, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        represents an oligodideoxynucleotide that can be used in the creation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vaccine for immunizing patient against respiratory syncytial virus, has epitopes of Paramyxoviridae F protein, and cytosine followed by guanine linked by phosphate bond-oligodideoxynucleotides.

Mature dendritic cells may also
                                                                                                                                                                                                                                                                                                       The present sequence is that of CpG oligodeoxynucleotide DV32 of the invention. A claimed method for generating dendritic cells involves contacting a dendritic cell precursor, especially a monocyte, with a D type oligodeoxynucleotide (see ACC48294) containing a central unmethylated CpG motif. The method is useful for generating mature dendritic cells and enhancing T cell responses, thus enhancing antigen presentation. Mature dendritic cells are useful for tumour immunotherapy.
                                                                                                                                                                  Generating mature dendritic cells for tumor immunotherapy or as vaccines
                                                                                                                                                                                   for activating the immune system to treat diseases such as cancer, comprises contacting a dendritic cell precursor with a D type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   D class CpG ODN sequence useful for encapsulating in SSCL, DV32.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of a D type CpG oligodeoxynucleotide that is an example of claimed D type oligodeoxynucleotides (see ACC48294) of the invention. Mature dendritic cells are obtained by contacting a dendritic cell precursor, such as a monocyte, with such an oligodeoxynucleotide. The method is useful for generating mature dendritic cells and enhancing T cell responses, thus enhancing antime presentation. Mature dendritic cells are useful for tumour immunotherapy, for augmenting an immune response to an infectious agent or to a vaccine, and as vaccines to prevent future infection or to a clivate the immune system to treat diseases such as cancer. Mature dendritic cells may also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CpG oligodeoxynucleotide; dendritic cell; tumour; immunotherapy; vaccine; cytostatic; immunostimulant; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Generating mature dendritic cells for tumor immunotherapy or as vaccines for activating the immune system to treat diseases such as cancer, comprises contacting a dendritic cell precursor with a D type oligodeoxynucleoride.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The invention relates to sterically stabilised cationic liposomes (SSCL) which comprises a cationic lipid, a co-lipid, stabilising agent and encapsulating a K type oligodeoxynucleotide (ODN) including a CpG motif. The invention is useful in pharmaceutical composition for impairing growth of a solid tumour cell (e.g. human tumour cell) bearing an immune response, which is expression of a cytokine (e.g. interferon gamma), particularly immunocherapeutic response against tumours or stimulating an invince an in vitro immune cell, and for inducing an immune response against an in vitro immune cell, and for inducing an immune response against an in vitro immune cell, and for inducing an immune response against an infurcal applications; for treating infectious diseases (e.g. tularemia, malaria, francisella, schistosomiasis, tuberculosis and leishmaniasis, cancer (e.g. solid tumours, AIDS-associated Kaposi's tumour, thyroid cancer etc), allergy (e.g. eczema, allergic rhinitis or coryza, hay fever, bronchial or allergic asthma, utticaria, food allergies), autoimmune consenses (e.g. diabetes, rheumatoid arthritis, lupus erythematosus and multiple sclerosis) and psoriasis. The present sequence is a D class CpG odn potentially useful for encapsulating in SSCL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
Cationic liposome composition for delivering oligodeoxynucleotides including a CpG motif in clinical applications, comprises a cationic lipid, a co-lipid, stabilizing agent and an encapsulated oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inducing the production of vascular endothelial growth factor by a cell, useful for inducing angiogenesis, comprises contacting the cell with a CpG oligodeoxynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vascular endothelial growth factor; VEGF; CpG oligonucleotide;

The present invention describes a method for inducing the production of vascular endothelial growth factor (VEGF) by a cell comprising contacting the cell with a CpG oligonucleotide and therefore inducing the production of VEGF by the cell. Also described: (1) inducing neovascularisation in a ctissue, comprising introducing a CpG oligonucleotide into an area of the tissue, where the formation of new blood vessels is desired, and so inducing neovascularisation in the area of the tissue; (2) promoting angiogenesis in an axea of the subject where angiogenesis is desired, comprising introducing a CpG oligonucleotide to the area, and so promoting angiogenesis in the subject; and (3) screening for an agent that inhibits neovascularisation, comprising administering a CpG oligonucleotide to a non-human mammal and administering the agent to the ammal, where inhibitition of angiogenesis in the configuration. The CpG oligonucleotides have vulnerary, vasotropic and antiarteriosclerotic continuous in gene therapy. The method and the CpG oligonucleotides can be used in igene therapy. The method and the CpG oligonucleotides can be used in inducing angiogenesis or exhibit male pattern baldness, or subjects with a skin graff, subjects who exhibit male pattern baldness, or subjects with a skin graff, subjects who exhibit male pattern baldness, or subjects who have a wound or who have a wound or who have catherents that inhibit neovascularisation. The present sequence the partern harman in the present sequence the partern harman and in subjects with its used in the exemplification of the partern harman and in a used in the exemplification of the partern harman and the control of the angents in the partern harman and the control of the angents in the partern harman and the control of the partern harman and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tuberculostatic, anti-inflammatory, hepatotropic; cytostatic;

continuence, and intereptable in an influence continuence but the continuence of all infections include calmonellosis, the fungal infections include appreciallosis, candidiasis, and cardidiodiomycosis, the fungal infections include aspergillosis, candidiasis, coccidiodiomycosis, cryptococcal meningitis, hepatitis B, and histoplasmosis, the protozoal infections include cryptosporidiosis, soft infections include cryptosporidiosis, pneumocystis carinii pneumonia and toxoplasmosis, viral infections include crytomegalovirus, hepatitis, herpes simplex, herpes zoster, human papilloma virus, molluscum contagiosum, oral hairy leukoplakia and progressive multifocal leukoencephalopathy and neoplasms include Kaposi's sarcoma, systemic non-Hodgkin's lymphoma and primary central nervous system lymphoma. The Hodgkin's lymphoma and primary central nervous system lymphoma. The howan papilloma virus includes HPV, genital warts and cervical cancer. The method simulates immune responses to any opportunistic infection in immunocompromised subjects. This sequence that epiresents an immunostimulatory CGG oligonucleotide sequence that stimulate the release of cytokines from cells of the immune system and can be used to increase immune response in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes a method of increasing an immune response to an opportunistic infection in an immunocompromised subject involves administering an immunostimulatory D Oligodeoxynucleotide or an immunostimulatory K oligodeoxynucleotide, where an antigenic epitope of a polypoptide is not administered to the subject. The method is useful for increasing an immune response to an opportunistic infection e.g. infection with a lentivirus such as human immunodeficiency virus (including HIV-1, HIV-2) e.g. AIDS; infections with Leishmania; bacterial infections; fungal infections; viral infections; protozoan infections; prion disease; and nucleoplasm in an immunocompromised subject or a

Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.

Claim 4; Page 36; 46pp; English.

The invention relates to novel immunogenic CpG oligodeoxymucleotides CG (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5 *NRNN-260**NRN-3' or 5 *RY-CpG-RY.

CC omprise one of the generic sequences 5 *NRNN-260**NRN-3' or 5 *RY-CpG-RY.

CC optionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery complex. The oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotides are able to induce a the oligonucleotides are able to induce a linkar and those of the sequence 5 *RY-CpG-RX-3' being able to induce a muoral response. It is thought that after calling able to induce a humoral (B-cell, which then release cytokines, cell mediated response, and dendritic cells), which then release cytokines, camplicating an allergic caction for activation of matural killer (NK) cells. A cell-mediated or humoral response is useful for treating, preventing or an immunogenic CpG oligonucleotide is administered either alone or complexing an allergic reaction (preferably asthma), or an infection, where an immunogenic CpG oligonucleotide is administered either alone or conditions, and the infections which may be treated include eczema, allergic conditions, and the infections which may be treated include eczema, allergic chickistosomisasis. Immune response induction may also be erythematosus, rheumatod arthritis and multiple sclerosis), a disease associated with immune system deficiency, and symptom resulting from agent to an autolomence and symptom may also be erythematosus, rheumatod arthritis and multiple sclerosis), and agent of an autolomence and symptom with an anti-disorder (e.g., lumune expense is useful for treating maniference and symptom and efficiency and in anti-dense therapy and to immune the and the infections with administered to the host. The present sequence represents an immunogenic CpG oligodeoxynucleotide of the invention immune response is used in antisense therapy and to improve the efficacy then lymphocytes ex vivo, producing activated lymphocytes which are deministered to the host. The present sequence represents an ima vaccine. The oligonucleotide is preferably administered

The invention Figures to move immunogenic type origonactoridaes comprise one of the generic sequences 5' NRNT-CpG-WNNN-3' or 5'-RY-CpG-RY comprise one of the generic sequences 5' NRNT-CpG-WNNN-3' or 5'-RY-CpG-RY comprise one of the generic sequences 5' NRNT-CpG-WNNN-3' or 5'-RY-CpG-RY optionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides are able to induce either a cell-delivery complex. The oligonucleotides are able to induce a tell-mediated (T-cell) response, with oligonucleotides of the sequence 5'-RY-CpG-RY-3' being able to induce a cell-mediated response, and those of the sequence 5'-NNT-CpG-WNNN-3' cell-mediated response, and those of the sequence 5'-NNT-CpG-WNNN-3' cell-mediated or induce a humoral response. It is thought that after administration, the oligonucleotide acts on antigen-presenting cells cells, macrophages and dendritic cells), which then release cytokines, cell-adding to activation of natural killer (NK) cells. The cells. The loading to activation of native sequence of cells. The cells of a meliorating an allergic reaction (preferably asthma), or an infection, where an immunogenic CpG oligonucleotide is administered either alone or in combination with an anti-allergant cant anti-infectious agent. The allergic conditions which may be treated include viral, conditions, and the infections which may be treated include viral, tenditions, and the infections which may be treated include viral, bacterial, fungal and protozoal infections such as tuberculosis, AlbS, bacterial, tungal and protozoal infections such as tuberculosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CpG oligodeoxymucleotide, unmethylated, antigen-presenting cell; immunogenic; cytokine release; natural killer cell; NK cell activation; cell-mediated immune response; T-cell response; humoral response; B-cell response; natibody production; immune response induction; vaccine; allergy; asthma; infection; bacterial; viral; fungal; protozoal; parasitic; tuberculosis; AIDS; autoimmune disease; lupus erythematosus; rheumatoid arthritis; multiple sclerosis; solid tumour; cancer; immune deficiency; biological warfare agent; cytostatic; antiarthritic; antimicrobial; antiallergic; protozoacide; tuberculostatic; antiarthritic; antiasthmatic; dermatological; phosphorothioate; ss.

ö The invention relates to novel immunogenic CpG oligodeoxynucleotides (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5'-NNNT-CpG-WNNN-3' or 5'-RY-CpG-RY 3'. The central CpG motif is unmethylated, and the oligonucleotides CpG oligodeoxynucleotide; unmethylated; antigen-presenting cell; immunogenic; cytokine release; natural killer cell; NK cell activation; cell-mediated immune response; T-cell response; humoral response; B-cell response; antibody production; immune response induction; vaccine; allergy; asthma; infection; bacterial; viral; fungal; protozoal; parasitic; tuberculosis; AIDS; autoimmune disease; lupus erythematosus; rheumatoid arthritis; multiple solerosis; solid tumour; cancer; immune deficiency; blological warfare agent; cytostatic; antiarthritic; antimicrobial; antiallergic; protozoacide; tuberculostatic; antiarthritic; antiasthmatic; dermatological; phosphorothioate; ss. Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms used in the treatment of an autoimmume disorder (e.g., lupus erythematosus, rheumatoid arthritis and multiple sclerosis), a disease associated with immune system deficiency, and symptoms resulting from exposure to an agent of biological warfare. An immunogenic CpG oligonucleotide, either alone or in combination with an anti-cancer immune response is used in antisense therapy and to improve the efficacy of a vaccine. The oligonucleotide is preferably administered to administered to the host. The present sequence represents a minmunogenic CpG oligodeoxynucleotide of the invention leishmania and schistosomiasis. Immune response induction may also be Gaps ö Score 16.4; DB 4; Length 20; Pred. No. 2.9e+02; 0; Mismatches 1; Indels Immunogenic CpG oligodeoxynucleotide, SEQ ID NO:40. coptionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting complex comprising an oligonucleotide of the invention and a targetting complex complex. The oligonucleotides are able to induce either a cell-mediated (T-cell) response or a humoral (B-cell, antibody) response, with classification and those of the sequence 5'-RN-TopG-WNN'3' and classed the sequence 5'-RNNT-GDG-WNN'3' and those of the sequence 5'-RNNT-GDG-WNN'3' and classed able to induce a humoral lesponse. It is thought that after administration, the oligonucleotide acts on antigen-presenting cells classified and activation of natural killer (NK) cells. A cell-mediated or humoral response can then occur by activation of T or B-cells. The classified and language and demittic cells, which then release cyckings, and there an immune response is useful for treating, preventing or induction of an immune response is useful for treating, preventing or where an immunospenic CpG oligonucleotide is administered either alone or in combination with an anti-alergenic agent or anti-infectious agent. The allergic conditions which may be treated include excema, allergic conditions which may be treated include viral, bacterial, fungal and protozoal infections such as tuberculosis, AIDS, lashmania and schletosomalasis. Immune response induction may also be erythematosus, rheumatoid arthritis and multiple sclerosis), a disease associated with immune system deficiency, and symptomes resulting from exposure to an agent of biological warfare. An immunosenic CpG oligonucleotide, either alone or in combination with an anti-cancer associated with immune spetch editors which are then anti-induction of an adent of biological warfare. The induction of an immune response is used in antisense therapy and to improve the efficacy of Immune response is used in antisense therapy and to improve the efficacy of Immune response is

/clone lib="3590 - RescueMu Grid M"
/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamHi; Site 2: BgIII;
RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu.' Grid M was grown at University of Arizona in 2001. DNA was extracted from leaf punches, double digested using BamHi and BgIII, and ligated to form circular plasmids. DHIOB cells were transformed and then screened on LB plates with ampicillin."

If you are interested in getting corresponding physical clones,
these are publicly available from ZmDB and may be found by BLAST
searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TIGR,
www.ibgr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the
maize cDNA sequences is either Virginia Walbot, Stanford or Pat
Schnable, Iowa State, then clones may be requested from ZmDB:
www.zmdb.iastate.edu.

EBroll SQ004 A20 R root, 3 week, hydroponic grown, no treatment, cv Optic, EBroll Hordeum vulgare subsp. vulgare cDNA clone BBroll SQ004 A20 S', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note="Vector: pspoRTI; Site_1: Sal I; Site_2: Not I; Non-normalised library, directionally cloned into psPORTI. Derived from roots of 3 week old hydroponically grown unstressed barley plants. Developed as part of the barley transcriptome resources of BBSRC/SEBRAD funded cereal IGF (Investigating Gene Punction) project."
                                                                                                              /note="vector: pUC19; Site 1: EcoR1; Site_2: EcoR1; The library was prepared by George Rudenko using poly (A) selected RNA and Universal Riboclone cDNA Synthesis System (Promega). CDNA was synthesized using both random and oligo (dr) primers in separate reactions and equipped with EcoR1 adaptors. Library was size-fractionated on agarcose gels (for insert size >400bp) and non-directionally cloned into EcoR1 digested pUC19 vector. Blue/white selection on carbenicillin-containing plates was used to recover
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /clone lib="root, 3 week, hydroponic grown, no treatment, cv Optic, EBrool"

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 855

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 14, P

Publication No. US20040105872A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: The Government of the United States of America, as represented by the APPLICANT: Rinman, Dennis M.
APPLICANT: Klinman, Dennis M.
APPLICANT: WITHOUN OF TREATING AND PREVENTING INFECTIONS IN IMMUNOCOMPROMISE)
TITLE OF INVENTION: SUBJECTS WITH IMMUNOSTIMULATORY CPG
TITLE OF INVENTION: 2003-09-17
CURRENT FILING DATE: 2003-09-17
PRIOR APPLICATION NUMBER: US 60/411,944
US-10-194-035-41
US-10-194-035-41
US-10-194-035-41

Sequencing vector: Plasmid; puCl8
Chemistry: Dye-terminator Big Dye.
Assembly program: Phrap version 0.990329.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 14 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1187 contig of 1187 bp in length
* 1288 12734: gap of unknown length
* 12635 12734: gap of unknown length
* 16557 26480: contig of 9722 bp in length
* 16557 26480: contig of 9732 bp in length
* 26581 26580: gap of unknown length
* 26591 29998: gap of unknown length
* 26592 36595: contig of 5791 bp in length
* 39595 36695: contig of 6597 bp in length
* 36596 39486: contig of 2791 bp in length
* 36596 39486: contig of 1313 bp in length
* 36596 39486: contig of 1735 bp in length
* 36596 39486: contig of 1735 bp in length
* 36596 39486: contig of 1735 bp in length
* 36596 39486: contig of 1735 bp in length
* 36596 39486: contig of 1735 bp in length
